Turnout is % of the group's registered voters.

BN, PH and PN are % of the group's valid votes statewide (inc. zeroes in seats it did not contest).

± is the out-of-sample validation error, measured against near-pure salurans (≥95% one group); it is not a confidence interval.

Small superscript and subscript figures are the upper and lower ends of a partial-identification range. This method of quantifying uncertainty is used where no out-of-sample test is possible at 90% concentration. The point estimate is not necessarily the band's midpoint.

Turnout is % of the group's registered voters.

BN, PH and PN are % of the group's valid votes; – indicates the coalition did not contest this seat.

Small superscript and subscript figures are the upper and lower ends of a partial-identification range. Every cell carries one, because no out-of-sample test is possible at seat level. The point estimate is not necessarily the band's midpoint.

Turnout is % of the group's registered voters.

BN, PH and PN are % of the group's valid votes; – indicates the coalition did not contest this seat.

Small superscript and subscript figures are the upper and lower ends of a partial-identification range. Every cell carries one, because no out-of-sample test is possible at seat level. The point estimate is not necessarily the band's midpoint.

Turnout is % of the group's registered voters.

BN, PH and PN are % of the group's valid votes; – indicates the coalition did not contest this seat.

Small superscript and subscript figures are the upper and lower ends of a partial-identification range. Every cell carries one, because no out-of-sample test is possible at seat level. The point estimate is not necessarily the band's midpoint.

Turnout is % of the group's registered voters.

BN, PH and PN are % of the group's valid votes; – indicates the coalition did not contest this seat.

Small superscript and subscript figures are the upper and lower ends of a partial-identification range. Every cell carries one, because no out-of-sample test is possible at seat level. The point estimate is not necessarily the band's midpoint.

N.56 Kukup: turnout and coalition support by ethnicity and age
